Visma Link for SuperOffice

Demo

DataBridge for Visma.net

Create sustainable integrations without custom development

INTEGRATE

Realise integrations between various systems without any development code

CONNECT

Connect, integrate and deploy without a single line of code.

AUTOMATE

Schedule integration routines to save time and reduce errors.

Visma.net Connector

A detailed view of the Visma.net connector
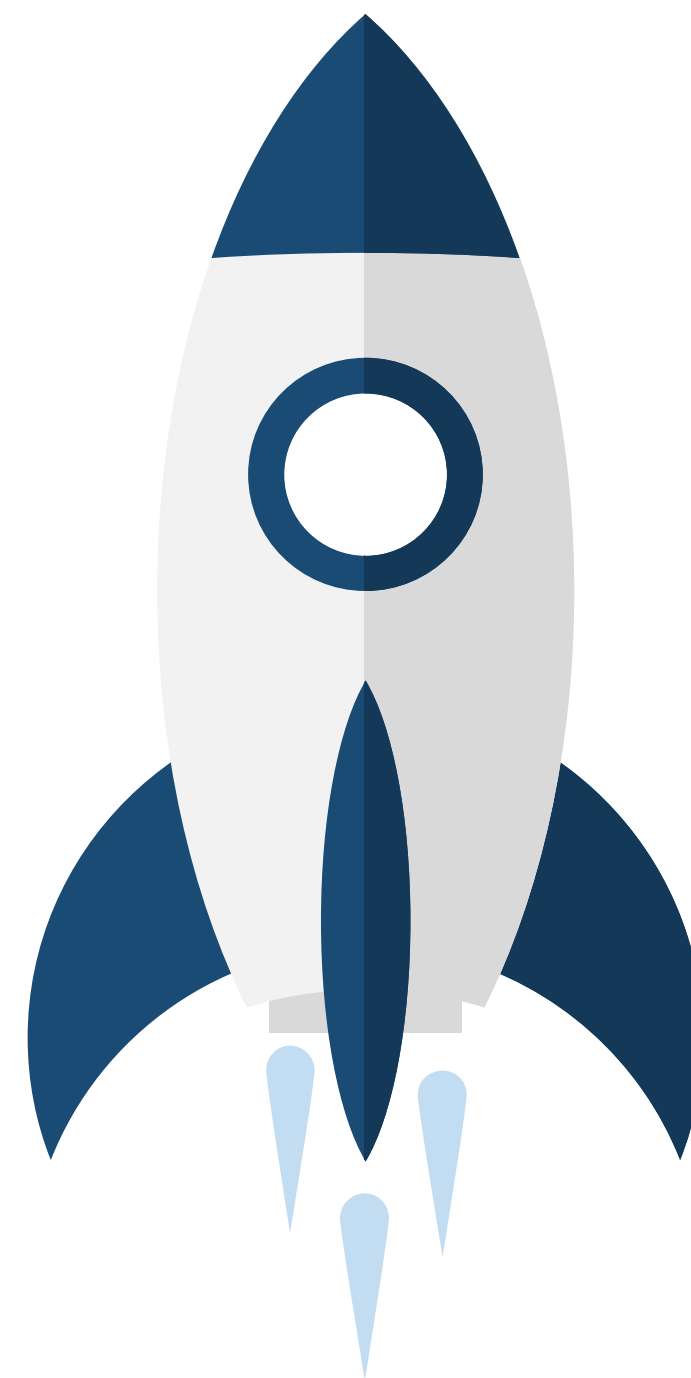

Visma.net Entities

The important Visma.net entities are supported and the list of entities is growing, currently supported: Customer, Vendor, Contact, AR Invoice, AR Invoice Line, in research: Stock Items, Non Stock Items, Sales Order, on the list: AP Invoice, GL Transactions, Subaccounts, Chart Of Accounts, Banking Transactions, AR Payments

Field selection & no coding!

Integrations can be easily configured by typing Visma field names instead of creating complex SQL statements. Through the easy to use settings and transformations the integration can be setup by consultants.

Defaults & Transformation

While integrating (or extracting) data default values can be specified and transformations can be used to manipulate data before integrating or sharing. Several transformations are available, such as; merge, copy, append, split, lower case, replace and many more.

Automation

Several methods are available to automate the integrations: profiles can be scheduled, triggered or can be based on external events.

Deduplication

Various deduplication possibilities on several fields. User can decide which action to take in case an existing record is found.

Data Storage & Transportation

DataBridge supports industry-standard data storage and transport providers for processing data. These are FTP, (s)FTP, Email, Google Sheets, Microsoft One-Drive, Microsoft SharePoint, Google Drive, and Dropbox.

Connectivity

DataBridge Connectivity Overview

Application Integration Connectors

DataBridge support the following direct connectors;

- Visma.net
- SuperOffice
- Microsoft SQL Server

Generic Data Integration Connectors

Through the general connector the following data integration types can be handled;

- XML
- Email attachments
- Google Sheets
- Excel (including xlsx, xlsm, xltx, xltm, xls, ods)
- ASCII
- CSV (including txt, csv, tsv)

Behind the scenes

DataBridge is architected to be secure — embedded with confidentiality, integrity, and high availability.

01 Certified compliance with security standards

DataBridge meets industry security standards. InfoBridge follows the strongest control criteria, both within the IT infrastructure and the production platform. We comply with ISO 27001, SOC 1, SOC 2, PCI DSS, and HIPAA.

02 Secure Cloud Infrastructure, built on Microsoft Azure

DataBridge is hosted on Microsoft Azure. The Azure cloud infrastructure is one of the most scalable, powerful, and secure cloud computing environments available.

03 Support

Our support team is reachable by phone (8x5) and by email (response time <3 hours)

NOW YOU ARE THINKING

How does this all fit together?

Thank you for your attention
